

#4246
OPEN GEAR
GREASE

CHAMPION 4246 OPEN GEAR GREASE is a black smooth textured grease that is specifically designed for use on open or exposed gears, and wire rope. This is a high temperature grease fortified with an extreme pressure additive to give vital protection in even the most extreme applications. It also contains additives to protect the gears from rust and corrosion, which is very important to the long life of the components.

In addition to open gears and wire rope it can be used on anti friction bearings, brass sleeve bushings, swing gear racks, roller circles as well as dipper handles.

CHAMPION 4246 OPEN GEAR GREASE can be applied with a brush, wiped on, mopped on, and in some instances poured on, giving it the flexibility you need on multiple application equipment.

TYPICAL SPECIFICATIONS

Product Code	4246
Color	Black
Texture	Smooth
NLGI Grade	#0
Penetration	385
Dropping Point ° F	None
Timken OK Load, lbs., min.	40
Corrosion Test Rating	1a
