

Champion Octane Treatment

Champion Octane Treatment delivers modest improvements to the octane number and combustion performance of gasoline. Our metal-free formula is completely safe for catalytic converters, oxygen sensors, and will not cause spark plug fouling as seen with metallic spark-knock inhibitors.

Champion Octane Treatment also has excellent solvency and contains dispersants for multi-tank clean-up of port fuel injectors and corrosion inhibition.

- Improves combustion
- Safe for catalytic converters
- Keeps fuel lines clean
- Cleans port fuel injectors
- Oxygen sensor safe
- Helps reduce spark-knock
- Provides corrosion protection
- Does not foul spark plugs

It is vitally important to use fuel which meets the octane requirement of your engine. In cases where compression ratios are high and low-octane gasoline is used, spark knock can cause catastrophic damage to pistons, bearings, and timing systems. One bottle treats up to 16 gallons.
