DIESEL  
FLO K**

## **CHAMPION DIESEL FLO K**

**CHAMPION DIESEL FLO K** has been developed for use in all diesel engines. Its particular characteristics make it an excellent flow improver. While conditioning the fuel and preventing gelling and wax build-ups, it lowers the pour point of the fuel as much as 30 degrees F and the cold filter plug point as much as 25 degrees F. It also disperses moisture and helps to prevent ice in the fuel tanks as well as ice crystals which will plug the fuel filter. It modifies the wax in the diesel fuel by substantially reducing the size, which not only allows operation at reduced temperatures, but also increases the fuel flow at warmer temperatures. This makes the engine much easier to start, thereby reducing wear on the engine, starter, battery and electrical system.

**CHAMPION DIESEL FLO K**, because of its formulation, helps clean injectors and keeps down carbon and varnish build-ups, thereby increasing power. It disperses water, helping to prevent freeze-ups yet contains no harmful methyl alcohol. Using Champion Diesel Flo K allows you to use #2 diesel fuel at a much lower temperature which gives increased horsepower and much better fuel mileage over blending #2 fuel with #1 fuel. You not only receive these benefits but you enjoy better economics using Diesel Flo K instead of mixing fuel.

**CHAMPION DIESEL FLO K** can up grade your fuel to Premium Quality.

This winter keep your trucks on the road and your costs down with Champion Diesel Flo K.

## **DIRECTIONS**

One gallon of Diesel Flo K treats 1500 gallons of diesel fuel for most applications.

During severe temperature operations or when moisture is suspected, double the treat rate.
