

#4306
SUPER VALVE
SHIELD

CHAMPION SUPER VALVE SHIELD has been developed to protect engines against rust, valve seat wear, and failure which could occur as a result of reduced lead content in gasoline. SUPER VALVE SHIELD is recommended for use in all engines designed for leaded gasoline.

At high engine operating temperatures, SUPER VALVE SHIELD's chemistry acts as a protective lubricant between exhaust valves and valve seats. Tests have indicated valve seat protection equal or superior to that provided by lead anti-knocks at the recommended concentration. CHAMPION SUPER VALVE SHIELD cleans carburetors and fuel injectors and reduces intake valve and port deposits.

CHAMPION SUPER VALVE SHIELD gives you the opportunity to bulk treat unleaded gasoline, making it suitable for use wherever a leaded fuel is recommended by the engine manufacturer.

CHAMPION SUPER VALVE SHIELD is not an octane booster, but a lubricating formula that protects valves and valve seats. SUPER VALVE SHIELD will also help clean the fuel system to achieve increased fuel economy and lower hydrocarbon emissions. Tests have indicated the valve seat protection given by lead anti-knocks is equaled by the addition of SUPER VALVE SHIELD.

CHAMPION SUPER VALVE SHIELD is the ultimate protection for engines designed to run on leaded fuel.

DIRECTIONS

One gallon of CHAMPION SUPER VALVE SHIELD treats 800 to 1,000 gallons of gasoline.
